Caspian Data Lake

Deep diving for treasure

Caspian is the latest innovation from the founders of ETZ, built on Big Data technology, providing the benefits of Big Data technology for the recruitment sector.

The Caspian Data Lake takes your agency's ETZ data and combines it with all the other information sources from across your software stack, to create a centralised data lake.

Caspian analyses and structures the information into a data warehouse, making it relevant and easy to use across your business.

Caspian provides reporting, allowing you to combine elements of data that would otherwise be difficult or impossible to look at in a meaningful way.

How it works

1.

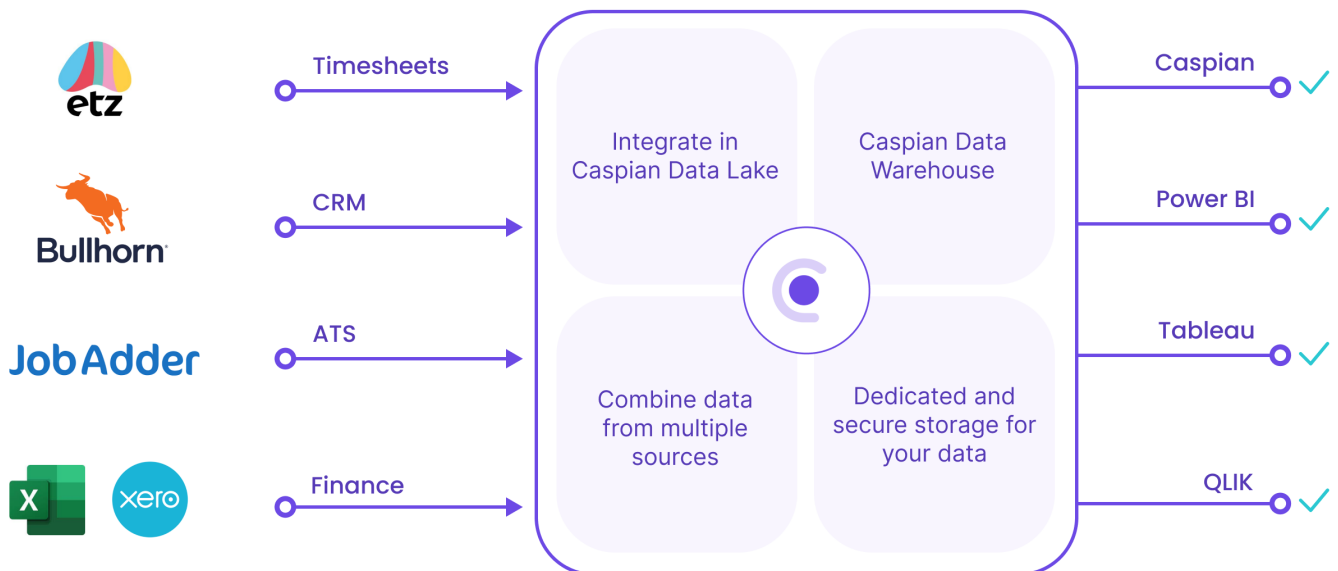

Connect your data sources

2.

Integrate and store your data in one single source

3.

Caspian structures your data into reports, or use your own analytics tools

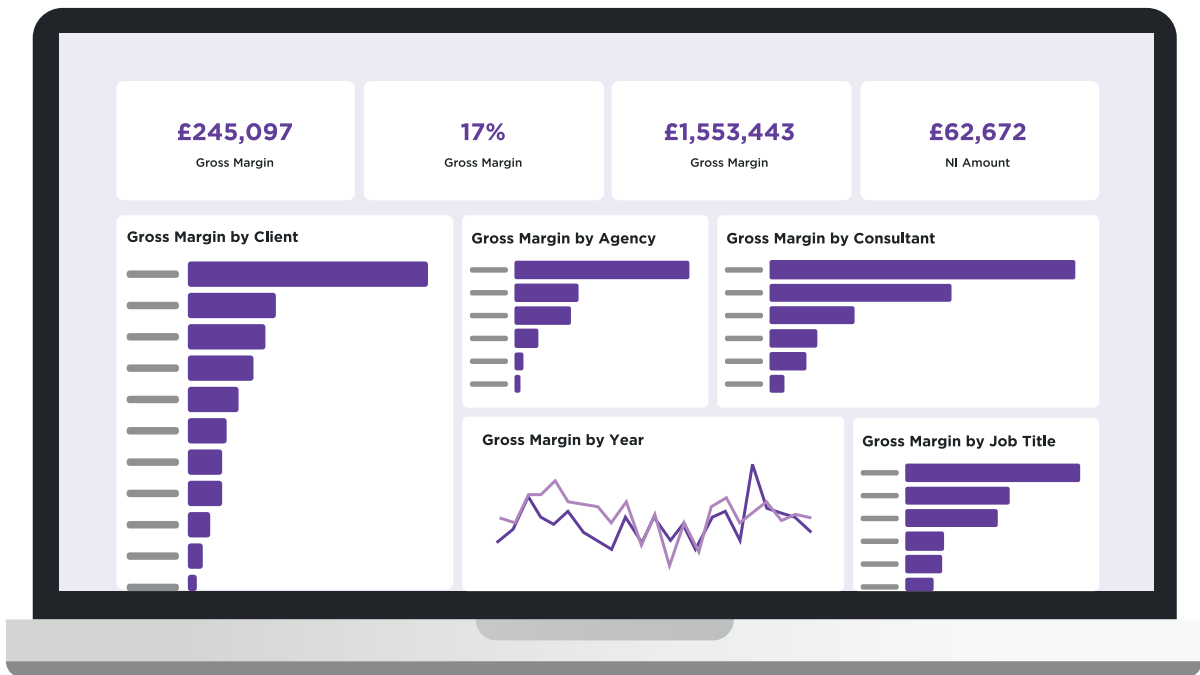

Caspian Reporting

Getting more from your data with Caspian

Caspian radically boosts the ability of agencies that use ETZ to identify opportunities that would otherwise be missed, providing a powerful source of competitive advantage.

Caspian provides a dashboard that provides KPIs at a glance including figures for Gross Margin (cash amount and %), timesheet summary statistics and Gross Margin for each candidate.

Standard report templates include:

Consultant Commission

Invoice And Payment Summary

Purchase Invoice Day Book

Sales Invoice Day Book

Split Margin

Timesheet Chaser

Timesheet Hours

Visit www.Caspian.cloud to find out more.

Caspian Pricing

Caspian pricing is based on how often data is pulled through from the data source.
